LoRaWAN / PROFINET Master - Converter

(Order Code: HD67D32-B2-868MHz)

Benefits and Main Features:

Very easy to configure

Power Supply 18...35V DC and 8...24 V AC

Temperature range: -40°C/+85°C (-40°F/+185°F)

UPDATED DOCUMENTATION:

Dear customer, we thank you for your attention and we remind you that you need to check that the following document is:

- Updated
- Related to the product you own

To obtain the most recently updated document, note the "document code" that appears at the top right-hand corner of each page of this document.

With this "Document Code" go to web page <u>www.adfweb.com/download/</u> and search for the corresponding code on the page. Click on the proper "Document Code" and download the updates.

REVISION LIST:

Revision	Date	Author	Chapter	Description
1.000	04/12/2020	Ff	All	First release version

WARNING:

ADFweb.com reserves the right to change information in this manual about our product without warning.

ADFweb.com is not responsible for any error this manual may contain.

TRADEMARKS:

All trademarks mentioned in this document belong to their respective owners.

Document code: MN67D32_ENG Revision 1.000 Page 3 of 28

SECURITY ALERT:

GENERAL INFORMATION

To ensure safe operation, the device must be operated according to the instructions in the manual. When using the device, legal and safety regulation are required for each individual application. The same applies also when using accessories.

INTENDED USE

Machines and systems must be designed so the faulty conditions do not lead to a dangerous situation for the operator (i.e. independent limit switches, mechanical interlocks, etc.).

QUALIFIED PERSONNEL

The device can be used only by qualified personnel, strictly in accordance with the specifications.

Qualified personnel are persons who are familiar with the installation, assembly, commissioning and operation of this equipment and who have appropriate qualifications for their job.

RESIDUAL RISKS

The device is state-of-the-art and is safe. The instruments can represent a potential hazard if they are inappropriately installed and operated by untrained personnel. These instructions refer to residual risks with the following symbol:

This symbol indicates that non-observance of the safety instructions is a danger for people that could lead to serious injury or death and / or the possibility of damage.

CE CONFORMITY

The declaration is made by our company. You can send an email to or give us a call if you need it.

CONNECTION SCHEME:

Document code: MN67D32_ENG Revision 1.000 Page 6 of 28

Industrial Electronic Devices

CHARACTERISTICS:

The HD67D32-B2 is a LoRaWAN / PROFINET Master Converter.

It allows the following characteristics:

- ✤ Electrical isolation between PROFINET and Power Supply;
- Two-directional information between LoRaWAN bus and PROFINET bus;
- Mountable on 35mm Rail DIN;
- ✤ Wide power supply input range: 12...35V DC and 8...24V AC;
- ➡ Wide temperature range: -40°C / 85°C [-40°F / +185°F].

CONFIGURATION:

You need Compositor SW67D32 software on your PC in order to perform the following:

- Define the parameter of PROFINET line;
- Define the parameter of LoRaWAN line;
- Define the list of LoRaWAN messages in uplink and downlink to the LoRaWAN gateway;
- Define the list of PROFINET slave devices to read and write;
- Update the device.

Document code: MN67D32_ENG Revision 1.000 Page 7 of 28

POWER SUPPLY:

The devices can be powered at 8...24V AC and 12...35V DC. For more details see the two tables below.

VAC 🔨		VDC	
Vmin	Vmax	Vmin	Vmax
8V	24V	12V	35V

Consumption at 24V DC:

Device	Consumption [W/VA]
HD67D32-B2-xxxMHz	3.5

Caution: Not reverse the polarity power

Document code: MN67D32_ENG Revision 1.000 Page 8 of 28

FUNCTION MODES:

The device has got two functions mode depending of the position of the 'Dip1 of Dip-Switch A':

- ✤ The first, with 'Dip1 of Dip-Switch A' at "OFF" position, is used for the normal working of the device.
- ✤ The second, with `Dip1 of Dip-Switch A' at ``ON" position, is used for upload the Project and/or Firmware.

For the operations to follow for the updating, see 'UPDATE DEVICE' section.

According to the functioning mode, the LEDs will have specifics functions, see 'LEDS' section.

Document code: MN67D32_ENG Revision 1.000 Page 9 of 28

LEDS:

The device has got four LEDs that are used to give information of the functioning status. The various meanings of the LEDs are described in the table below.

LED	Normal Mode	Boot Mode
1: Device State (green)	Blinks slowly (~1Hz)	Blinks quickly: Boot state Blinks very slowly (~0.5Hz): update in progress
2: LoRaWAN communication (yellow)	Blinks when LoRaWAN data is received	Blinks quickly: Boot state Blinks very slowly (~0.5Hz): update in progress
3: PROFINET communication (yellow)	Blinks when a PROFINET response is received	Blinks quickly: Boot state Blinks very slowly (~0.5Hz): update in progress
4: Error state (yellow)	ON: An error in the communication busses occurs OFF: No errors are present	Blinks quickly: Boot state Blinks very slowly (~0.5Hz): update in progress

Industrial Electronic Devices

LORAWAN:

The LoRaWAN® specification is a Low Power, Wide Area (LPWA) networking protocol designed to wirelessly connect battery operated 'things' to the internet in regional, national or global networks, and targets key Internet of Things (IoT) requirements such as bidirectional communication, end-to-end security, mobility and localization services.

LoRaWAN® network architecture is deployed in a star-of-stars topology in which gateways relay messages between end-devices and a central network server.

The wireless communication takes advantage of the Long Range characteristics of the LoRa physical layer, allowing a single-hop link between the end-device and one or many gateways. All modes are capable of bi-directional communication, and there is support for multicast addressing groups to make efficient use of spectrum during tasks such as Firmware Over-The-Air (FOTA) upgrades or other mass distribution messages.

Converters from HD67D32 serie act as end-devices and they can communicate with one or more LoRwaWAN Gateways.

The converters support all the standard datarates and they work both on public and private networks.

Document code: MN67D32 ENG Revision 1.000 Page 10 of 28

Document code: MN67D32_ENG Revision 1.000 Page 11 of 28

ETHERNET:

The Ethernet port is used for programming the device and for PROFINET communication.

The Ethernet connection must be made using Connector2 of HD67D32-B2 with at least a Category 5E cable. The maximum length of the cable should not exceed 100m. The cable has to conform to the T568 norms relative to connections in cat.5 up to 100 Mbps. To connect the device to an Hub/Switch is recommended the use of a straight cable, to connect the device to a PC is recommended the use of a cross cable.

Document code: MN67D32_ENG Revision 1.000 Page 12 of 28

USE OF COMPOSITOR SW67D32:

To configure the Converter, use the available software that runs with Windows called SW67D32. It is downloadable on the site <u>www.adfweb.com</u> and its operation is described in this document. The software works with MS Windows (XP, Vista, Seven, 8, 10; 32/64bit).

When launching the SW67D32, the window below appears (Fig. 2).

It is necessary to have installed .Net Framework 4.

NEW CONFIGURATION / OPEN CONFIGURATION:

The "New Configuration" button creates the folder which contains the entire device's configuration.

A device's configuration can also be imported or exported:

- To clone the configurations of a Programmable "LoRaWAN / PROFINET Master -Converter" in order to configure another device in the same manner, it is necessary to maintain the folder and all its contents;
- To clone a project in order to obtain a different version of the project, it is sufficient to duplicate the project folder with another name and open the new folder with the button "Open Configuration".

SOFTWARE OPTIONS:

By pressing the "**Settings**" () button there is the possibility to change the language of the software and check the updatings for the compositor.

In the section "Language" it is possible to change the language of the software.

Web Software	• Options		×

ADF Web Industrial Electronic Devices

SET COMMUNICATION:

By Pressing the "**Set Communication**" button from the main window for SW67D32 (Fig. 2) the window "Set Communication" appears (Fig. 3).

The means of the fields for "PROFINET Master" are:

- In the field "IP Address" the IP address for PROFINET side of the converter is defined;
- In the field "SubNet Mask" the SubNet Mask for PROFINET side of the converter is defined;
- In the field "Gateway" the default gateway of the net is defined. This feature can be enabled or disabled pressing the Check Box field. This feature is used for going out of the net;
- In the field "Name of Station" the name for PROFINET side of the converter is defined.

The means of the fields for "LoRaWAN" are:

- In the field "RF Band" the wireless band used for LoRaWAN communication is defined;
- In the field "Network Type" the type of LoRaWAN network is defined;
- If the field "Adaptive Data Rate" is checked, the converter will enable the ADR functionalities to select the best data rate to be used in relation to the environmental conditions;
- In the field "Data Rate" the data rate for LoRaWAN communication is defined;
- In the field "Transmission Type" the type of LoRaWAN communication is defined;
- In the field "Max Payload Size" the maximum dimension of the LoRaWAN messages is defined (fixed in relation to the data rate selected);
- In the field "JoinEUI" the ID of the application server is defined;
- In the field "Activation Method" the method used to join into a LoRaWAN network is defined;

Document code: MN67D32_ENG Revision 1.000 Page 16 of 28

	🛛 🗸 OK 🛛 💥 Cancel	

Figure 3: "Set Communication" window

- In the field "Device Address" the device identifier (DevEUI) is defined (only for ABP method);
- In the field "Network Session Key" the key used for the communication with the LoRaWAN gateway (NwkSKey) is defined (only for ABP method);
- In the field "Application Session Key" the key for encryption and decryption of the payload (AppSKey) is defined (only for ABP method);
- If OTAA method is selected, in the field "Application Key" the secret key for the dynamic activation of the converter in the LoRAWAN network is defined.

Document code: MN67D32_ENG Revision 1.000 Page 18 of 28

PROFINET ACCESS:

By Pressing the "**PROFINET Access**" button from the main window for SW67D32 (Fig. 2) the window "Definition of PROFINET Devices Present in Network" appears (Fig. 4).

This section is used to define the list of the PROFINET slaves to read/write with the PROFINET Master. It is possible to add the PROFINET slaves from the hardware catalog. If a new device will be connected, it is possible to instal the GSDML file.

	NET Network Access						—	×
	67D32)evices Preser	nt in Network

	ОК	Cancel						

Figure 4: "Definition of PROFINET Devices Present in Network" window

Document code: MN67D32_ENG Revision 1.000 Page 19 of 28

The means of the fields below are:

- ✤ In the field "Name of Station" is checked, the name of the PROFINET slave is defined;
- ✤ In the field "IP Address" the IP Address of the PROFINET slave is defined;
- ✤ If the field "Automatic new session when StationProblemIndicator is Active" is checked, the converter opens a new communication session when an error is present in the slave station;
- ✤ In the field "Update Time [ms]" the delay used for IO communication is defined;
- ✤ In the field "Answer TimeOut" the allowed number of cycles without response from the slave is defined.

<u>Warning:</u>

The data from/to the slaves are mapped consecutively into the IN/OUT PROFINET arrays, following the order with which they are defined.

Document code: MN67D32_ENG Revision 1.000 Page 20 of 28

By clicking on "**Modules**" button, it is possible to import the modules for the selected PROFINET Master device. The window "Definition Module and/or Submodules of PROFINET Device" appears (Fig. 5). In the main table it is possible to import the Modules of the PROFINET device in use. In the properties below, it is possible to set the parameters of the Master. These options depends on the Master in use, refer to the manual of the PROFINET device.

	Subslot	Module	Module Desc	Submo	odule	Submodule	Map Only Data	Different Word	Input	Output	Mnemonic	
	1 - Subslot	EthernetIPMaster	EthernetIP Adapter	Submod	dule V1	Description			0	0

Figure 5: "Definition Module and/or Submodules of PROFINET Device" window

Document code: MN67D32_ENG Revision 1.000 Page 21 of 28

The means of the checkboxes inside the table are:

- If the field "Map Only Data" is checked, only the data of the modules are mapped into the LoRaWAN map. Otherwise, for each module there will be the status of IN and OUT areas too (1 byte);
- ✤ If the field "Different Word" is checked, the data of the different modules are mapped in different and consecutive words.

UPDATE DEVICE:

By pressing the "**Update Device**" button, it is possible to load the created Configuration into the device; and also the Firmware, if necessary. This by using the Ethernet port.

If you don't know the actual IP address of the device you have to use this procedure:

- Turn OFF the Device;
- Put Dip1 of 'Dip-Switch A' in ON position;
- Turn ON the device
- Connect the Ethernet cable;
- Insert the IP "192.168.2.205";
- Select which operations you want to do;
- Press the "Execute update firmware" button to start the upload;
- When all the operations are "OK" turn OFF the Device;
- Put Dip1 of 'Dip-Switch A' in OFF position;
- Turn ON the device.

If you know the actual IP address of the device, you have to use this procedure:

- Turn ON the Device with the Ethernet cable inserted;
- Insert the actual IP of the Converter;
- Select which operations you want to do;
- Press the "Execute update firmware" button to start the upload;
- ✤ When all the operations are "OK" the device automatically goes at Normal Mode.

At this point the configuration/firmware on the device is correctly updated.

Document code: MN67D32_ENG Revision 1.000 Page 23 of 28

Note:

When you receive the device, for the first time, you also have to update the Firmware in the HD67D32 device.

<u>Warning:</u>

If Fig. 7 appears when you try to do the Update try these points before seeking assistance:

- Try to repeat the operations for the updating;
- Try with another PC;
- Try to restart the PC;
- Check the LAN settings;
- If you are using the program inside a Virtual Machine, try to use in the main Operating System;
- If you are using Windows Seven, Vista, 8 or 10 make sure that you have the administrator privileges;
- In case you have to program more than one device, using the "UDP Update", you have to cancel the ARP table every time you connect a new device on Ethernet. For do this you have to launch the "Command Prompt" and write the command "arp d". Pay attention that with Windows Vista, Seven, 8, 10 you have to launch the "Command Prompt" with Administrator Rights;
- Pay attention at Firewall lock.

LORAWAN PAYLOAD

The LoRAWAN messages in Uplink and Downlink are structured into a defined format in order to recognize them from LoRaWAN gateway side and to understand to which PROFINET data they are associated.

The payload of the LoRaWAN messages is defined in Hex format:

- The first byte refers to the row of the tables defined into "LoRaWAN Access" section of SW67D32: it can have a value between 0 and 255 (0xFF);
- The following bytes will contain the data to be linked to the internal memory arrays of the converter (using "Start Byte" and "Num. Byte" of "LoRaWAN Access" section of SW67D32);

Example 1:

the converter is sending a LoRaWAN message related to row 4 of "LoRaWAN Access \rightarrow LoRaWAN Uplink" table of "LoRaWAN Access" section of SW67D32 with a "Num. Byte" set of '4'. The data from these 4 bytes is "01 02 03 04" (hex). The payload of the LoRaWAN message will look like "04 01 02 03 04" where:

- ← 04: index of the row of "LoRaWAN Access \rightarrow LoRaWAN Uplink" table;
- 01 02 03 04: data taken from internal memory array of the converter.

Example 2:

The external LoRaWAN gateway needs to send a LoRaWAN message to the converter and link it to row 3 of "LoRaWAN Access \rightarrow LoRaWAN Downlink" table of "LoRaWAN Access" section of SW67D32. The "Num. Byte" set is '4' and the data to be written is "55 66 77 88" (hex). The payload of the LoRaWAN message will look like "03 55 66 77 88" where:

- ♦ 03: index of the row of "LoRaWAN Access → LoRaWAN Downlink" table;
- ✤ 55 66 77 88: data to be written to the internal memory array of the converter.

WARRANTIES AND TECHNICAL SUPPORT:

For fast and easy technical support for your ADFweb.com SRL products, consult our internet support at <u>www.adfweb.com</u>. Otherwise contact us at the address support@adfweb.com

RETURN POLICY:

If while using your product you have any problem and you wish to exchange or repair it, please do the following:

- Obtain a Product Return Number (PRN) from our internet support at <u>www.adfweb.com</u>. Together with the request, you need to provide detailed information about the problem.
- Send the product to the address provided with the PRN, having prepaid the shipping costs (shipment costs billed to us will not be accepted).

If the product is within the warranty of twelve months, it will be repaired or exchanged and returned within three weeks. If the product is no longer under warranty, you will receive a repair estimate.
