UPDATED DOCUMENTATION:

Dear customer, we thank you for your attention and we remind you that you need to check that the following document is:

- Updated
- ✤ Related to the product you own

To obtain the most recently updated document, note the "document code" that appears at the top right-hand corner of each page of this document.

With this "Document Code" go to web page <u>www.adfweb.com/download/</u> and search for the corresponding code on the page. Click on the proper "Document Code" and download the updates.

SECURITY ALERT:

GENERAL INFORMATION

To ensure safe operation, the device must be operated according to the instructions in the manual. When using the device, legal and safety regulation are required for each individual application. The same applies also when using accessories.

INTENDED USE

Machines and systems must be designed so the faulty conditions do not lead to a dangerous situation for the operator (i.e. independent limit switches, mechanical interlocks, etc.).

QUALIFIED PERSONNEL

The device can be used only by qualified personnel, strictly in accordance with the specifications.

Qualified personnel are persons who are familiar with the installation, assembly, commissioning and operation of this equipment and who have appropriate qualifications for their job.

RESIDUAL RISKS

The device is state-of-the-art and is safe. The instruments can represent a potential hazard if they are inappropriately installed and operated by untrained personnel. These instructions refer to residual risks with the following symbol:

This symbol indicates that non-observance of the safety instructions is a danger for people that could lead to serious injury or death and / or the possibility of damage.

CE CONFORMITY

The declaration is made by our company. You can send an email to or give us a call if you need it.

EXAMPLE OF CONNECTION:

Industrial Electronic Devices

Document code: MN67083_ENG Revision 1.100 Page 6 of 41

Figure 1b: Connection scheme for HD67083-B2-xxxMHz-xxx

Document code: MN67083_ENG Revision 1.100 Page 7 of 41

CHARACTERISTICS:

The HD67083-B2-xxxMHz-0 and HD67083-B2-xxxMHz-xxx are converters from wM-Bus and M-Bus to Modbus TCP Slave and vice-versa.

They allows the following characteristics:

- ✤ Electrical isolation between Ethernet and M-Bus;
- → Baud Rate and Parity (for M-Bus on wire) changeable with software;
- → Available wM-Bus frequency: 169 MHz or 433 MHz or 868 MHz (in relation to the order code);
- Mountable on 35mm Rail DIN;
- ✤ Wide power supply input range: 15...21V AC or 18...35V DC;
- ➡ Wide temperature range: -40°C / 85°C [-40°F / +185°F].

CONFIGURATION:

You need Compositor SW67083 software on your PC in order to perform the following:

- Define the parameter of Modbus TCP;
- Define the parameter of M-Bus line;
- Define the parameter of wM-Bus line;
- Define which M-Bus variables are readable on Modbus TCP;
- Update the device.

Document code: MN67083_ENG Revision 1.100 Page 8 of 41

POWER SUPPLY:

The devices can be powered at 15...21V AC and 18...35V DC. The consumption depends to the code of the device. For more details see the two tables below.

vac \sim		VDC	
Vmin	Vmax	Vmin	Vmax
15V	21V	18V	35V

Consumption at 24V DC:

Device	[W/VA]
HD67083-B2-xxxMHz-0	3.5

Device	No Load [W/VA]	Full Load [W/VA]*
HD67083-B2-xxxMHz-20		4
HD67083-B2-xxxMHz-40		5
HD67083-B2-xxxMHz-80	3.5	8
HD67083-B2-xxxMHz-160		14
HD67083-B2-xxxMHz-250		30

* This value is with all the Slave M-Bus devices of the code (20, 40, 80, 160, 250) connected to the line (wired side)

Caution: Not reverse the polarity power

HD67083-B2-xxxMHz-0 HD67083-B2-xxxMHz-xxx

Document code: MN67083_ENG Revision 1.100 Page 9 of 41

FUNCTION MODES:

The device has got two functions mode depending of the position of the 'Dip1 of Dip-Switch A':

- The first, with 'Dip1 of Dip-Switch A' at "OFF" position, is used for the normal working of the device;
- ✤ The second, with `Dip1 of Dip-Switch A' at ``ON" position, is used for uploading the Project and/or Firmware.

For the operations to follow for the updating, see 'UPDATE DEVICE' section.

According to the functioning mode, the LEDs will have specifics functions, see 'LEDS' section.

Document code: MN67083_ENG Revision 1.100 Page 10 of 41

LEDS:

The device has got five LEDs that are used to give information of the functioning status. The various meanings of the LEDs are described in the table below.

LED	Normal Mode	Boot Mode
1: Device state (green)	e (green) Blinks slowly (~1Hz) Blinks quickly	
2: wM-Bus comm. (green)	Blinks quickly when data on wM-Bus arrives	Blinks quickly
3: M-Bus comm. (green) (only for HD67083-B2- xxxMHz-xxx)	Blinks quickly when a reply to a M- Bus request arrives	Blinks quickly
4: Modbus comm.	Changes state when a Modbus TCP request arrives	Blinks quickly
5: Link Ethernet (green)	ON: Ethernet cable connected OFF: Ethernet cable disconnected	ON: Ethernet cable connected OFF: Ethernet cable disconnected

Document code: MN67083_ENG Revision 1.100 Page 11 of 41

ETHERNET:

The Ethernet port is used for the Modbus TCP communication and for programming the device.

The Ethernet connection must be made using Connector2 of HD67083-B2-xxxMHz-0 or HD67083-B2-xxxMHz-xxx with at least a Category 5E cable. The maximum length of the cable should not exceed 100m. The cable has to conform to the T568 norms relative to connections in cat.5 up to 100 Mbps. To connect the device to an Hub/Switch is recommended the use of a straight cable, to connect the device to a PC/PLC/other is recommended the use of a cross cable.

WM-BUS:

The standards of M-Bus Wireless are specified in EN 13757-4. The signal is @ 868Mhz or 433 MHz or 169 MHz (in relation to the order code). Our converter supports wM-Bus Mode S, Mode T and Mode C.

The Antenna connector is a SMA Female ('Female Outer Shell' and 'Female Receptacle') so the Antenna must have a SMA Male connector.

Document code: MN67083_ENG Revision 1.100 Page 12 of 41

M-BUS:

The M-Bus is a unpolarized bus.

A two wire standard telephone cable (JYStY N*2*0.8 mm) is used as the transmission medium for the M-Bus. The maximum distance between a slave and the repeater is 350m; this length corresponds to a cable resistance of up 29Ω . This distance applies for the standard configuration having Baud rates between 300 and 9600 Baud, and a maximum of 250 slaves. The maximum distance can be increased by limiting the Baud rate and using fewer slaves, but the bus voltage in the space state must at no point in a segment fall below 12V, because of the remote powering of the slaves. In the standard configuration the total cable length should not exceed 1000m, in order to meet the requirement of a maximum cable capacitance of 180nF. (*Taken from M-Bus specifics*)

Document code: MN67083_ENG Revision 1.100 Page 13 of 41

USE OF COMPOSITOR SW67083:

To configure the Converter, use the available software that runs with Windows called SW67083. It is downloadable from the site <u>www.adfweb.com</u> and its operation is described in this document (*this manual is referenced to the last version of the software present on our web site*). The software works with MSWindows (XP, Vista, Seven, 8, 10; 32/64bit).

When launching the SW67083, the window below appears (Fig. 2).

It is necessary to have installed .Net Framework 4.

We ADFweb.	com - Configurator SW67083 - wM-Bus / M-Bus / Modbus TCP Slave	×
	67083 M-Bus / Modbus TCP Slave - Converter

NEW CONFIGURATION / OPEN CONFIGURATION:

The "New Configuration" button creates the folder which contains the entire device's configuration.

A device's configuration can also be imported or exported:

- To clone the configurations of a Programmable "M-Bus / M-Bus Wireless / Modbus TCP Slave - Converter" in order to configure another device in the same manner, it is necessary to maintain the folder and all its contents;
- To clone a project in order to obtain a different version of the project, it is sufficient to duplicate the project folder with another name and open the new folder with the button "Open Configuration".

SOFTWARE OPTIONS:

By pressing the "**Settings**" () button there is the possibility to change the language of the software and check the updatings for the compositor.

In the section "Language" it is possible to change the language of the software.

Web Software	Options		<
Software	67083

Selected	Language :
	English
	Page 1 / 1
🗸	OK Cancel

In the section "Connection Options", it is possible to check if there are some updatings of the software compositor in ADFweb.com website. Checking the option "Check Software Update at Start of Program", the SW67083 check automatically if there are updatings when it is launched.

Document code: MN67083_ENG Revision 1.100 Page 16 of 41

SET COMMUNICATION:

This section define the fundamental communication parameters of buses, Modbus, M-Bus and wM-Bus.

By Pressing the "**Set Communication**" button from the main window for SW67083 (Fig. 2) the window "Set Communication" appears (Fig. 3). The window is divided in four sections.

In the section "Select Device" it is possible to select the type of converter (M-Bus port present or not).

The means of the fields for "Modbus TCP Slave" are:

- In the field "IP ADDRESS" the IP address to assign to the converter is defined;
- In the fields "SUBNET Mask" the SubNet Mask to assign to the converter is defined;
- In the fields "GATEWAY" the default gateway of the net is defined. This feature can be enabled or disabled pressing the Check Box field. This feature is used for going out of the net.
- ✤ In the field "Port" the TCP port used for the Modbus TCP communication is defined;
- In the field "Connection TimeOut (min)" the time that the converter will wait before closing the unused TCP connections opened is defined.

The means of the fields for "wM-Bus" are:

- In the field "Mode" the communication mode used for the M-Bus Wireless communication is defined;
- In the field "Radio Channel" the Radio Channel used for the M-Bus Wireless communication is defined (only for 169 MHz version).

The means of the fields for "M-Bus" are (present only if the M-Bus port is "Present"):

- In the field "Baudrate" the data rate of the M-Bus line is defined;
- In the field "Parity" the parity of the M-Bus line is defined;
- If the field "M-Bus Polls" it is possible to select how the M-Bus polls are sent (fixed to "Cyclic");
- In the field "Node State value when slave device is not present" it is possible to insert the value to assign to the "Node State" when the Gateway doesn't find the interrogated M-Bus slave.

M-BUS

By Pressing the "M-Bus" button from the main window for SW67083 (Fig. 2) the window "M-Bus Network" appears (Fig. 4).

In the section "Nodes" it is possible to create the nodes of M-Bus line:

- In the field "**Description**" it is possible to write a short description of the node.
- ✤ In the field "M-Bus Type" it is possible to select if the node uses M-Bus (on wire) or wM-Bus.

SECTION NODES (M-BUS NODES):

- In order to create a new node it is necessary to select which address use, selecting "Primary ID" or "Secondary ID", to makes the requests and then insert the "Primary Address" (from 1 to 250) or the Secondary Address" (from 0 to 99999999) of M-Bus device.
- In the field "Node State" it is possible to insert an address Modbus that contain the Status of the M-Bus device. If you don't need to know this, put this register at 0.
- In the field "Identification Number" it is possible to insert an address Modbus that contain the Identification Number of the M-Bus device. You have to read two consecutive registers for knowing the value. If you don't need to know this, put this register at 0.
- If the field "Convert BCD in Integer Identification Num." is checked the Converter converts the Identification Number that is normally expressed in BCD in a Integer.
- In the field "Swap Identification Num." it is possible to select the swap mode of the Identification Number. If swap isn't necessary you have to select "None"; otherwise see the section "Swap Identification" (page xxx) of this document for select the swap mode.
- If the field "Send SND_NKE" is checked, the Converter send the "SND_NKE" frame to start the communication.

Figure 4a: "M-Bus Network" window

User Manual M-Bus Wireless / Modbus TCP Slave

Document code: MN67083_ENG Revision 1.100 Page 18 of 41

- In the field "Send Reset App." Is checked the Converter send the "Application Reset" command to the slave.
- In the field "Variables List" it is possible to select which type of variables definition to use. If is selected "By Type" it is necessary to fill all fields, in the section Variables, with the correct values; otherwise if "By Position" is selected you can insert the progressive number of the variable that you need (page 29 for more information).
- In the field "Cut after" it is possible to select after how many frames stops data requests. It is used when the slave has got many data frames and you don't need to read all them.
- In the field "Manufacturing Specific Data" is possible to insert the starting address Modbus from which you want to save the information of Manufacturer Specific (after DIF=0x0F or DIF=0x1F).
- In the field "Length (MSD) [1 241]" is possible to insert the length of the data you need to save.
- In the field "Offset (MSD) [0 240]" is possible to insert the offset from where save the data;
- In the field "Access Number" is possible to define a Modbus register where saving the number of accesses to the meter.

After that, pressing the "ADD NODE" button, a new node appears in the left side of the window. In order to modify a created node it is necessary to select the desired node, change the wrong items and then press the "MODIFY NODE" button.

Document code: MN67083_ENG Revision 1.100 Page 19 of 41

SECTION NODES (WM-BUS NODES):

- In the field "Manufacturer ID" it is necessary to define the Manufacturer ID of the wM-Bus node.
- In the field "Address" it is necessary to define the ID of the wM-Bus node.
- If the field "Version" it is necessary to define the version of the wM-Bus node.
- In the field "Device Type" it is possible to define the Type of the wM-Bus node.
- The field "Key Enable" is used to decode the M-Bus frame sent by the wM-Bus node if it uses encrypted communication. In the following 16 fields, you have to specify the key to decode the message.
- If the field "Node State" is checked the gateway reserves one byte at the starting of internal data array and saves the status of the counter.
- If the field "Identification Number" is checked the gateway reserves four bytes at the starting of internal data array and saves the Secondary Address of the device.
- If the field "RSSI" is checked the gateway reserves one byte at the starting of internal data array and saves the signal quality of the device.
- In the field "Access Number" is possible to define a Modbus register where saving the number of accesses to the meter.
- If the field "Convert BCD in Integer Identification Num." is checked the Converter converts the Identification Number that is normally expressed in BCD in a Integer.

- In the field "Swap Identification Num." it is possible to select the swap mode of the Identification Number. If swap isn't necessary you have to select "None"; otherwise see the section "Swap Identification" (page 32) of this document for select the swap mode.
- In the field "Variables List" it is necessary to select which type of variables definition to use. If is selected "By Type" it is necessary to fill all fields, in the section Variables, with the correct values; otherwise if "By Position" is selected you can insert the progressive number of the variable that you need (page 29 for more information).
- In the field "Manufacturing Specific Data" is possible to insert the starting address Modbus from which you want to save the information of Manufacturer Specific (after DIF=0x0F or DIF=0x1F).
- In the field "Length (MSD) [1 241]" is possible to insert the length of the data you need to save.
- ✤ In the field "Offset (MSD) [0 240]" is possible to insert the offset from where save the data.

After that, pressing the "ADD NODE" button, a new node appears in the left side of the window. In order to modify a created node it is necessary to select the desired node, change the wrong items and then press the "MODIFY NODE" button.

Document code: MN67083_ENG Revision 1.100 Page 21 of 41

SECTION VARIABLES (BY TYPE):

Selecting the desired node it is possible to add a variable. In order to create a new variable it is necessary to fill these items:

- To use the created variable the field "Enable Variable" must be checked. If you have created a variable but for the moment it is unused it is possible to uncheck the field "Enable Variable" without delete it;
- In the field "Description" it is possible to write a description of the variable (it isn't a necessary information, it helps the readability of the tree of network);
- The field "Type of Data" is used to select the unit of measure;
- In the field "VIF ASCII String" insert the string of VIF. It is possible to use this field only if the "Type of Data" is "VIF is in ASCII";
- In the field "Function Field" it is necessary to select the type of data;
- The field "Dimension" is used to select the dimension of the variable (8, 16, 24, 32, 32 real, 48, 64 bit, Variable Length);
- In the field "Length(Variable Len)" insert the length of the data in the case of the dimension is "Variable Length";
- In the field "Unit" if it is necessary it is possible to select the unit of that variable. The Unit is used for indicates from which device the data come;
- In the field "Modbus Register" it is necessary to insert the value of Modbus Register that contains the data of the M-Bus device. It is possible to insert from Modbus Register "1" to "60000";
- ✤ In the field "Modbus Re Scale" it is necessary to insert the value of Modbus Register that contains the value of measure scale. If the scale is not necessary, you have to insert the number "0" in this field. It is possible to insert from Modbus Register "1" to "60000";
- In the field "Storage Number" if it is necessary it is possible to insert the value of storage counter of that variable. With this field the slave can indicate and transmit various stored counter states or historical values, in the order in which they occur;

SW67083 H-Bus Network VID 1 - test VAR - var11 VAR - var21 D 5 - test2 D 10 - test3 WM-Bus Node - Address 0x34180610 - Wireless 1	Variables		Energy (J) Instantaneous Value 8 0 0 100 1 9 11 Not Selected elegister 0 D 0 SS 0 ger Force Integer 3: None	2
--	-----------	--	--	---

- In the field "Tariff" if it is necessary it is possible to insert the value of the tariff of that variable. The Tariff is used for indicates from which device the data come;
- In the field "VIFE" it is possible to select a sub-type of "Type of Data";
- ✤ If the field "Use Six Modbus Register" and the "Type of Data" is "Time Point" it is possible to read the information of Year, Month, Day, Hour, Minutes, Seconds on six consecutive Modbus registers without decoding the data (if not selected the values are the same of the reply of the slave device, so coded with a determinate structure). You have to insert the first Modbus Register.
- If the field "From BCD to Integer" is checked the Converter converts the BCD value of variable in Integer format. This happens only if the variable is in BCD format; if it isn't nothing changes.
- If the field "Convert in Float" is checked the Converter converts the data into Float type. Every variable occupies two consecutive Modbus Registers and the first one is the one defined in "Modbus Register". In this case the float value is multiplied by the "Modbus Re Scale" automatically;
- If the field "Force Integer 32" is checked the Converter maps the variables with a dimension <32 bit in two consecutive Modbus registers as a 32 bit variables;</p>
- In the field "**Post Operation**" it is possible to define an operation on the data read before mapping them on Modbus registers.

Having completed this fields, to add the variable the button "ADD VARIABLE" must be pressed.

In order to modify a created variable it is necessary to select the desired variable, change the wrong items and then press the "MODIFY VARIABLE" button.

Document code: MN67083_ENG Revision 1.100 Page 23 of 41

SECTION VARIABLES (BY POSITION):

Selecting the desired node it is possible to add a variable. In order to create a new variable it is necessary to fill these items:

- To use the created variable the field "Enable Variable" must be checked. If you have created a variable but for the moment it is unused it is possible to uncheck the field "Enable Variable" without delete it;
- In the field "Description" it is possible to write a description of the variable (it isn't a necessary information, it helps the readability of the tree of network);
- The field "Dimension" is used to select the dimension of the variable (8, 16, 24, 32, 32 real, 48, 64 bit, Variable Length);
- In the field "Length(Variable Len)" insert the length of the data in the case of the dimension is "Variable Length";
- In the field "Modbus Register" it is necessary to insert the value of Modbus Register that contains the data of the M-Bus device. It is possible to insert from Modbus Register "1" to "60000";
- In the field "Modbus Re Scale" it is necessary to insert the value of Modbus Register that contains the value of measure scale. If the scale is not necessary, you have to insert the number "0" in this field. It is possible to insert from Modbus Register "1" to "60000";

You have to insert the first Modbus Register;

M-Bus Network

If the field "From BCD to Integer" is checked the Converter converts the BCD value of variable in Integer format. This happens only if the variable is in BCD format; if it isn't nothing changes;

Document code: MN67083_ENG Revision 1.100 Page 24 of 41

- If the field "Force Integer 32" is checked the Converter maps the variables with a dimension <32 bit in two consecutive Modbus registers as a 32 bit variables;</p>
- In the field "**Post Operation**" it is possible to define an operation on the data read before mapping them on Modbus registers.

In the field "**Position**" insert the number of the variable that you want on Modbus. Having completed this fields, to add the variable the button "**ADD VARIABLE**" must be pressed.

In order to modify a created variable it is necessary to select the desired variable, change the wrong items and then press the "MODIFY VARIABLE" button.

User Manual M-Bus Wireless / Modbus TCP Slave

Document code: MN67083_ENG Revision 1.100 Page 25 of 41

Example:

0x55 - Check Sum 0x16 - Stop Byte

User Manual M-Bus Wireless / Modbus TCP Slave

COPY, PASTE AND DELETE ITEMS:

By pressing the right button of the mouse over an item (Variable or Node) it is possible to Copy, Paste and Delete.

It is possible to Copy a variable from a Node and copy it to another Node, or copy a Variable from a project and paste in another one.

It is also possible to copy an entire Node with all its Variables.

Mote: By pressing the **"Import Network**" button is possible to import the file generated by the Analyzer HD67031.

Swap Identification:

This field is used for select the Swap mode of Identification Number.

At the moment there are these possibilities:

- None;
- + Type 1.

Examples:

- Identification Number (Secondary Address): 12345678; Address Register 1000; Convert BCD in Integer Identification Num. not checked.

None	Type 1
1000: 0x1234	1000: 0x5678
1001: 0x5678	1001: 0x1234

- Identification Number (Secondary Address): 12345678; Address Register 1000; Convert BCD in Integer Identification Num. checked.

None	Type 1
1000: 0x00BC	1000: 0x614E
1001: 0x614E	1001: 0x00BC

Document code: MN67083_ENG Revision 1.100 Page 31 of 41

Mass	10 ^(x - 3)	kg	0.001 kg to 10000 kg
	x = 0	Seconds	
On Time	x = 1	Minutes	
on nine	x = 2	Hours	
	x = 3	Days	
Operating Time		ke On Time	
Power	10 ^(x - 3)	W	0.001 W to 10000 W
Power	10 ^(x)	J/h	0.001 kJ/h to 10000 kJ/h
Volume Flow	10 ^(x - 6)	m³/h	0.001 l/h to 10000 l/h
Volume Flow Ext.	10 ^(x - 7)	m³/min	0.0001 l/min to 1000 l/min
Volume Flow Ext.	10 ^(x - 9)	m³/s	0.001 ml/s to 10000 ml/s
Mass Flow	10 ^(x - 3)	kg/h	0.001 kg/h to 10000 kg/h
Flow Temperature	10 ^(x - 3)	°C	0.001 °C to 1 °C
Return Temperature	10 ^(x - 3)	°C	0.001 °C to 1 °C
Temperature Difference	10 ^(x - 3)	К	1 mK to 1000 mK
External Temperature	10 ^(x - 3)	°C	0.001 °C to 1 °C
Pressure	10 ^(x - 3)	bar	1 mbar to 1000 mbar
Averaging Duration	coded like On Time		
Actuality Duration	coded lil	ke On Time	
Time Point	x = 0	Date	Data type G
	x = 1	Time&Date	Data type F
Unit for H.C.A.			dimensionless

To know the meaning of value read in the "Modbus Re Scale" field, you must follow this table (x = Value read in Modbus Re Scale):

Data type F:

2 ⁷	2 ⁶	2 ⁵	2 ⁴	2 ³	2 ²	2 ¹	2 ⁰
2 ¹⁵	2 ¹⁴	2 ¹³	2 ¹²	2 ¹¹	21 ⁰	2 ⁹	2 ⁸
2 ²³	2 ²²	2 ²¹	22 ⁰	2 ¹⁹	2 ¹⁸	2 ¹⁷	2 ¹⁶
2 ³¹	2 ³⁰	2 ²⁹	2 ²⁸	2 ²⁷	2 ²⁶	2 ²⁵	2 ²⁴

Min (0 ... 59);

Hour (0 ... 23); Day (1 ... 31); Month (1 ... 12); Year (0 ... 99); Time Invalid (0=Valid, 1=Invalid); Summer Time (0=Standard Time, 1=Summer Time); Reserved (0).

Data type G:

2 ⁷	2 ⁶	2 ⁵	2 ⁴	2 ³	2 ²	2 ¹	2 ⁰
2 ¹⁵	2 ¹⁴	2 ¹³	2 ¹²	2 ¹¹	21 ⁰	2 ⁹	2 ⁸

For example, if you have defined:

- Type of Data= Energy (J);
- Function Field=Instantaneous Value;
- Dimension= 32 bit;
- Modbus Register=150 (Register 151 declared implicitly because the dimension is 32 bit);
- Modbus Re Scale=152.

After the request, in Modbus register 150 you read 0x0004, in 151 you read 0x5678 and in register 152 is write 0x0006. The value obtained is: $284280 \times 10^{(6)}$ J.

User Manual M-Bus Wireless / Modbus TCP Slave

Document code: MN67083_ENG Revision 1.100 Page 32 of 41

Document code: MN67083_ENG Revision 1.100 Page 33 of 41

MANUFACTURER SPECIFIC DATA

Using this function is possible to save into Modbus registers the part of M-Bus frame that is coded like Manufacturer Specific Data. Usually these data are at the end of the frame and after a DIF byte with the value 0x0F of 0x1F.

Here an example of the frame and the mentioned data (hexadecimal):

68 20 20 68 08 01 72 78 56 34 12 86 04 05 00 08 00 00 00 0C 78 78 56 34 12 0F 11 22 33 44 55 66 77 88 99 AA 74 16

If you want to save all ten bytes from Modbus register 200 you have to compile the fields "Manufacturer Specific Data", "Length (MSD) [1 – 241]" and Offset (MSD) [0 - 240] in this way: Manufacturer Specific Data: 200 | Length: 10 | Offset: 0. On Modbus you will have this result: reg.200=1122h, reg.201=3344h, reg.202=5566h, reg.203=7788h, reg.204=99AAh

If you want to save only the byte 33 and 44 in the Modbus register 200 you have to compile the fields "Manufacturer Specific Data", "Length (MSD) [1 – 241]" and Offset (MSD) [0 - 240] in this way: Manufacturer Specific Data: 200 | Length: 2 | Offset: 2. On Modbus you will have this result: reg.200=3344h

If you want to save only the byte 66 in the Modbus register 200 you have to compile the fields "Manufacturer Specific Data", "Length (MSD) [1 – 241]" and Offset (MSD) [0 - 240] in this way: Manufacturer Specific Data: 200 | Length: 1 | Offset: 5. On Modbus you will have this result: reg.200=6600h

UPDATE DEVICE:

By pressing the **"Update Device**" button, it is possible to load the created Configuration into the device; and also the Firmware, if necessary.

If you don't know the actual IP address of the device you have to use this procedure:

- Turn off the Device;
- Put Dip1 of 'Dip-Switch A' at ON position;
- Turn on the device
- Connect the Ethernet cable;
- Insert the IP "192.168.2.205";
- Press the "Ping" button, "Device Found!" must appear";
- Press the "Next" button;
- Select which operations you want to do;
- Press the "Execute update firmware" button to start the upload;
- When all the operations are "OK" turn off the Device;
- Put Dip1 of 'Dip-Switch A' at OFF position;
- Turn on the device.

If you know the actual IP address of the device you have to use this procedure:

- Turn on the Device with the Ethernet cable inserted;
- Insert the actual IP of the Converter;
- Press the "Ping" button, must appear "Device Found!";
- Press the "Next" button;
- Select which operations you want to do;
- Press the "Execute update firmware" button to start the upload;
- ✤ When all the operations are "OK" the device automatically goes at Normal Mode.

At this point the configuration/firmware on the device is correctly updated.

User Manual M-Bus Wireless / Modbus TCP Slave

Note:

When you install a new version of the software, if it is the first time it is better you do the update of the Firmware in the HD67083 device.

Note:

When you receive the device, for the first time, you also have to update the Firmware in the HD67083 device.

Warning:

If Fig. 6 appears when you try to do the Update try these points before seeking assistance:

- Try to repeat the operations for the updating;
- Try with another PC;
- Try to restart the PC;
- ✤ If you are using the program inside a Virtual Machine, try to use in the main Operating System;
- ✤ If you are using Windows Seven or Vista or 8, make sure that you have the administrator privileges;

SW67083 Ethernet Update	×

SCAN & DECODE FUNCTION:

"SCAN & DECODE" functions are integrated in the configurator software SW67083. It is possible to access to these functions by simple click on the " \bigcirc sen & Decode " button.

It has the following characteristics:

- Possibility to scan M-Bus network;
- Automatic decode of M-Bus telegrams;
- Easy connection directly through the Ethernet port of the converters.

For the description of the function, it is possible to refer to this manual: www.adfweb.com/download/filefold/SCAN&DECODE_ENG.pdf

ORDERING INFORMATIONS:

The ordering part number is formed by a valid combination of the following:

HD67083 – B 2 – xxxMHz – xxx

Available M-Bus ports 0: only M-Bus Wireless port 20: M-Bus Wireless port + M-Bus port (up to 20 standard M-Bus slaves (1.5mA consumption)) 40: M-Bus Wireless port + M-Bus port (up to 40 standard M-Bus slaves (1.5mA consumption)) 80: M-Bus Wireless port + M-Bus port (up to 80 standard M-Bus slaves (1.5mA consumption)) 80: M-Bus Wireless port + M-Bus port (up to 160 standard M-Bus slaves (1.5mA consumption)) 160: M-Bus Wireless port + M-Bus port (up to 160 standard M-Bus slaves (1.5mA consumption)) 250: M-Bus Wireless port + M-Bus port (up to 250 standard M-Bus slaves (1.5mA consumption)) 250: M-Bus Wireless port + M-Bus port (up to 250 standard M-Bus slaves (1.5mA consumption)) 260: M-Bus Wireless port + M-Bus port (up to 250 standard M-Bus slaves (1.5mA consumption)) 270: M-Bus Wireless communication @ 169 MHz 433MHz: M-Bus Wireless communication @ 433 MHz 868MHz: M-Bus Wireless communication @ 868 MHz
Connectors Type 2: Fixed Screw Terminal
Enclosure Type B: Modulbox 4M, 35mm DIN Rail mounting
Device Family HD67083: M-Bus / M-Bus Wireless / Modbus TCP Slave - Converter

All technical content within this document can be modified without notice. The content of the document is a under continual renewal. For losses due to fire, earthquake, third party access or other accidents, or intentional or accidental abuse, misuse, or use under abnormal conditions repairs are charged to the user. ADFweb.com S.r.I. will not be liable for accidental loss of use or inability to use this product, such as loss of business income. ADFweb.com S.r.I. shall not be liable for consequences of improper use.

OTHER REGULATIONS AND STANDARDS:

WEEE INFORMATION

Disposal of old electrical and electronic equipment (as in the European Union and other European countries with separate collection systems).

This symbol on the product or on its packaging indicates that this product may not be treated as household rubbish. Instead, it should be taken to an applicable collection point for the recycling of electrical and electronic equipment. If the product is disposed correctly, you will help prevent potential negative environmental factors and impact of human health, which could otherwise be caused by inappropriate disposal. The recycling of materials will help to conserve natural resources. For more information about recycling this product, please contact your local city office, your household waste disposal service or the shop where you purchased the product.

RESTRICTION OF HAZARDOUS SUBSTANCES DIRECTIVE

The device respects the 2002/95/EC Directive on the restriction of the use of certain hazardous substances in electrical and electronic equipment (commonly referred to as Restriction of Hazardous Substances Directive or RoHS).

CE MARKING C E The product conforms with the essential requirements of the applicable EC directives.

WARRANTIES AND TECHNICAL SUPPORT:

For fast and easy technical support for your ADFweb.com SRL products, consult our internet support at <u>www.adfweb.com</u>. Otherwise contact us at the address support@adfweb.com

RETURN POLICY:

If while using your product you have any problem and you wish to exchange or repair it, please do the following:

- Obtain a Product Return Number (PRN) from our internet support at <u>www.adfweb.com</u>. Together with the request, you need to provide detailed information about the problem.
- Send the product to the address provided with the PRN, having prepaid the shipping costs (shipment costs billed to us will not be accepted).

If the product is within the warranty of twelve months, it will be repaired or exchanged and returned within three weeks. If the product is no longer under warranty, you will receive a repair estimate.
