UPDATED DOCUMENTATION:

Dear customer, we thank you for your attention and we remind you that you need to check that the following document is:

- Updated
- ✤ Related to the product you own

To obtain the most recently updated document, note the "document code" that appears at the top right-hand corner of each page of this document.

With this "Document Code" go to web page <u>www.adfweb.com/download/</u> and search for the corresponding code on the page. Click on the proper "Document Code" and download the updates.

REVISION LIST:

Revision	Date	Author	Chapter	Description
1.000	05/12/2017	Ff	All	First release version

WARNING:

ADFweb.com reserves the right to change information in this manual about our product without warning.

ADFweb.com is not responsible for any error this manual may contain.

TRADEMARKS:

All trademarks mentioned in this document belong to their respective owners.

SECURITY ALERT:

GENERAL INFORMATION

To ensure safe operation, the device must be operated according to the instructions in the manual. When using the device, legal and safety regulation are required for each individual application. The same applies also when using accessories.

INTENDED USE

Machines and systems must be designed so the faulty conditions do not lead to a dangerous situation for the operator (i.e. independent limit switches, mechanical interlocks, etc.).

QUALIFIED PERSONNEL

The device can be used only by qualified personnel, strictly in accordance with the specifications.

Qualified personnel are persons who are familiar with the installation, assembly, commissioning and operation of this equipment and who have appropriate qualifications for their job.

RESIDUAL RISKS

The device is state-of-the-art and is safe. The instruments can represent a potential hazard if they are inappropriately installed and operated by untrained personnel. These instructions refer to residual risks with the following symbol:

This symbol indicates that non-observance of the safety instructions is a danger for people that could lead to serious injury or death and / or the possibility of damage.

CE CONFORMITY

The declaration is made by our company. You can send an email to or give us a call if you need it.

EXAMPLE OF CONNECTION:

Document code: MN67938_ENG Revision 1.000 Page 5 of 34

CONNECTION SCHEME:

Figure 1a: Connection scheme for HD67938-IP-B2

Document code: MN67938_ENG Revision 1.000 Page 6 of 34

Document code: MN67938_ENG Revision 1.000 Page 7 of 34

CHARACTERISTICS:

The HD67938-B2 is a BACnet slave / MQTT Converter.

It allows the following characteristics:

- Mountable on 35mm Rail DIN;
- ✤ Wide power supply input range: 18...35V DC and 8...24V AC;
- ✤ Wide temperature range: -40°C / 85°C [-40°F / +185°F].

CONFIGURATION:

You need Compositor SW67938 software on your PC in order to perform the following:

- Define the parameter of MQTT;
- Define the parameter of BACnet line;
- Define the MQTT topics to be published/subscribed in the MQTT Server;
- Define the list of BACnet objects accessible on BACnet side;
- Update the device.

Document code: MN67938_ENG Revision 1.000 Page 8 of 34

POWER SUPPLY:

The devices can be powered at 8...24V AC and 12...35V DC. For more details see the two tables below.

VAC 🔨		VDC	
Vmin	Vmax	Vmin	Vmax
8V	24V	12V	35V

Consumption at 24V DC:

Device	Consumption [W/VA]
HD67938-IP-B2	3.5
HD67938-MSTP-B2	3.5

Caution: Not reverse the polarity power

Document code: MN67938_ENG Revision 1.000 Page 9 of 34

FUNCTION MODES:

The device has got two functions mode depending of the position of the 'Dip1 of Dip-Switch A':

- ✤ The first, with 'Dip1 of Dip-Switch A' at "OFF" position, is used for the normal working of the device.
- ✤ The second, with `Dip1 of Dip-Switch A' at ``ON" position, is used for upload the Project and/or Firmware.

For the operations to follow for the updating, see 'UPDATE DEVICE' section.

According to the functioning mode, the LEDs will have specifics functions, see 'LEDS' section.

Document code: MN67938_ENG Revision 1.000 Page 10 of 34

LEDS:

The device has got five LEDs that are used to give information of the functioning status. The various meanings of the LEDs are described in the table below.

LED	Normal Mode	Boot Mode	
1: Device State (green)	Blinks slowly (~1Hz) Blinks slowly (~1Hz)		
		Blinks very slowly (~0.5Hz): update in progress	
2: BACnet communication (yellow)	Blinks when BACnet communication is running	Blinks quickly: Boot state Blinks very slowly (~0.5Hz): update in progress	
	ON: MQTT not connected	Blinke swiekly Doot state	
3: MQTT status (yellow)	OFF: MQTT connected	Blinks quickly: Boot state Blinks very slowly (~0.5Hz): update in progress	
	Blinking: MQTT communication		
4: Not used (yellow)	OFF	Blinks quickly: Boot state	
4. Not used (yenow)		Blinks very slowly (~0.5Hz): update in progress	
5: Ethernet Link (green)	ON: Ethernet cable connected	ON: Ethernet cable connected	
5. Ethemet Elik (green)	OFF: Ethernet cable disconnected	OFF: Ethernet cable disconnected	
	Led5: Green Link Ethernet	Led1: Green Device state Led2: Yellow Serial comm. Led3: Yellow MQTT status Led4: Yellow Not used	

Document code: MN67938_ENG Revision 1.000 Page 11 of 34

RS485 (for BACnet MS/TP):

For terminating the RS485 line with a 120Ω resistor it is necessary to put ON dip 1, like in figure.

The maximum length of the cable should be 1200m (4000 feet).

Here some codes of cables:

- Belden: p/n 8132 2x 28AWG stranded twisted pairs conductor + foil shield + braid shield;
- Belden p/n 82842 2x 24AWG stranded twisted pairs conductor + foil shield + braid shield;
- Tasker: p/n C521 1x 24AWG twisted pair conductor + foil shield + braid shield;
- Tasker: p/n C522 2x 24AWG twisted pairs conductor + foil shield + braid shield.

Document code: MN67938_ENG Revision 1.000 Page 12 of 34

ETHERNET:

The Ethernet port is used for programming the device and for MQTT and BACnet/IP communication.

The Ethernet connection must be made using Connector2 of HD67938-B2 with at least a Category 5E cable. The maximum length of the cable should not exceed 100m. The cable has to conform to the T568 norms relative to connections in cat.5 up to 100 Mbps. To connect the device to an Hub/Switch is recommended the use of a straight cable, to connect the device to a PC is recommended the use of a cross cable.

Document code: MN67938_ENG Revision 1.000 Page 13 of 34

USE OF COMPOSITOR SW67938:

To configure the Converter, use the available software that runs with Windows called SW67938. It is downloadable on the site <u>www.adfweb.com</u> and its operation is described in this document. The software works with MS Windows (XP, Vista, Seven, 8, 10; 32/64bit).

When launching the SW67938, the window below appears (Fig. 2).

It is necessary to have installed .Net Framework 4.

NEW CONFIGURATION / OPEN CONFIGURATION:

The "New Configuration" button creates the folder which contains the entire device's configuration.

A device's configuration can also be imported or exported:

- To clone the configurations of a Programmable "BACnet Slave / MQTT Converter" in order to configure another device in the same manner, it is necessary to maintain the folder and all its contents;
- To clone a project in order to obtain a different version of the project, it is sufficient to duplicate the project folder with another name and open the new folder with the button "Open Configuration".

SOFTWARE OPTIONS:

By pressing the "**Settings**" () button there is the possibility to change the language of the software and check the updatings for the compositor.

In the section "Language" it is possible to change the language of the software.

Web Software	Options	×
Software	67938

In the section "Software Settings", it is possible to enable/disable some keyboard's commands for an easier navigation inside the tables contained in the different sections of the software.

SET COMMUNICATION:

By Pressing the "**Set Communication**" button from the main window for SW67938 (Fig. 2) the window "Set Communication" appears (Fig. 3).

The window is divided in different sections in order to define the different parameters of the converter:

- BACnet Slave
- MQTT
- Ethernet
- + Wi-Fi
- TLS (Transport Layer Security)
- NTP (Network Time Protocol)

BACNET SLAVE (FOR BACNET/IP):

This section is used to define the main parameters of BACnet/IP line. The means of the fields are:

- In the fields "IP ADDRESS" the IP address of BACnet/IP side of the converter is defined;
- In the fields "SUBNET Mask" the SubNet Mask of BACnet/IP side of the converter is defined;
- In the fields "GATEWAY" the default gateway of the network is defined. This feature can be enabled or disabled pressing the Check Box field. This feature is used for going out of the net;
- In the field "Port" the port used for BACnet communication is defined. The default port used for BACnet communication is 47808, but is possible to insert any value;
- In the field "BACnet Device Name" the name of BACnet/IP side of the converter is defined;
- In the field "Device Identifier" the ID of BACnet/IP side of the converter is defined;
- If the field "BACnet description up to 32 chars" is checked, the description of the BACnet objects can be up to 32 chars.

BACNET SLAVE (FOR BACNET MS/TP):

This section is used to define the main parameters of BACnet MS/TP line. The means of the fields are:

- In the field "Baudrate" the data rate of the BACnet line is defined;
- In the field "Parity" the parity of the line is defined;
- In the field "BACnet Device Name" the name to give to the BACnet node is defined;
- In the field "MAC Address" the MAC of BACnet node (from 0 to 254) is defined;
- The field "Max Master" specifies the highest allowable address for master nodes. The value shall be less than or equal to 127;
- The field "Max Info Frames" specifies the maximum number of information frames the node may send before it must pass the token;
- In the field "Device Instance" the of the BACnet MS/TP side of the converter is defined;
- In the field "Network" the BACnet MS/TP network number is defined;
- If the field "BACnet description up to 32 chars" is checked, the description of the BACnet objects can be up to 32 chars.

1. BACnet Slave		Ξ
Туре	BACnet MS/TP ~	
Baudrate	57600 ~

Device Instance	1	
NetWork	1	
BACnet description up to 3	32 chars	

Figure 3c: "Set Communication → BACnet Slave" window

This section is used to define the main parameters of MQTT line. The means of the fields are:

- In the field "Server URL" the URL or the IP Address of the MQTT Server is defined;
- In the field "Server Port" the port used for MQTT communication is defined;
- In the field "Client ID" the Client ID of the converter is defined (if ned);
- In the field "Keep Alive (seconds)" the delay with which the Keep Alive message is sent on MQTT is defined;
- If the field "Clean Session" is checked, the last MQTT messages are deleted by the Server and the Client in case of missing ACK. If unchecked, the Server and the Client hold the last MQTT messages and, in case of incorrect disconnection or missing ACK, they try to send again them since all the ACK messages are exchanged correctly (valid only for QoS 1 and QoS 2);
- If the field "Will Flag" is checked, the converter will publish the Will topic at the connection to the Server. With this feature, in case of incorrect disconnection, the Server will publish this topic to all the MQTT Clients that subscribed it;
- In the field "Topic Name Will" the topic used for Will message is defined;
- In the field "Message Will" the payload of the Will message is defined;
- In the field "Retained Will" the converter will send the Will message with Retain flag enabled. In this way, the Server will hold the last Will message;
- In the field "QoS Will" the QoS type for Will message is defined;
- ✤ Im the field "Username" the username for the connection to the MQTT server is defined;
- ✤ In the field "Password" the password for the connection to the MQTT server is defined;
- ✤ In the field "Send Time (seconds)" the delay with which the MQTT messages are published is defined.

ETHERNET:

This section is used to define the general parameters of Ethernet. The means of the fields are:

- In the field "Ip Address" the IP address of the converter is defined;
- In the field "SubNet Mask" the Subnet Mask of the converter is defined;
- In the field "Gateway" the default gateway of the net is defined. This feature can be enabled or disabled pressing the Check Box field. This feature is used for going out of the net;
- In the field "DNS" the DNS address is defined. This field is required if the server address is define by URL and not IP Address.

<u>WI-FI:</u>

This section is used to define the general parameters of Wi-Fi. It is possible to defined the type of Wi-Fi communication:

- Access Point;
- Client.

The means of the fields for Access Point configuration are:

- In the field "IP Address" the IP address of the converter is defined;
- In the field "Subnet Mask" the SubNet Mask of the converter is defined;
- In the field "GATEWAY" the default gateway of the net is defined. This feature can be enabled or disabled pressing the Check Box field. This feature is used for going out of the net;
- In the field "DNS" the DNS address is defined. This field is required if the server address is define by URL and not IP Address.
- In the field "Port" the port used for MQTT communication is defined;
- In the field "SSID" the name of the Wi-Fi network to create is defined;
- In the field "Password" the password used for Wi-Fi connection is defined;
- In the field "Type" the type of security protocol used by the Wi-Fi network is defined;

Document code: MN67938_ENG Revision 1.000 Page 22 of 34

- If the field "Enable DHCP" is checked, the converter acts as DHCP Server for the Clients connected. If the option is enabled, in the fields "DHCP First IP Address" and "DHCP SUBNET Mask" the IP Addresses range used for DHCP is defined. In the field "Lease Time (seconds)" the required time for the renewing of the IP Address assigned to the Client is defined;
- In the field "Max Client" the maximum number of Wi-Fi Clients accepted is defined;
- ✤ In the field "Channel" the channel for Wi-Fi communication is defined.

The means of the fields for Client configuration are:

- If the field "Obtain an IP Address automatically" is checked, the converter gets the IP Address using DHCP. Otherwise, the IP Address is defined as static;
- In the field "IP Address" the IP address of the converter is defined;
- In the field "Subnet Mask" the SubNet Mask of the converter is defined;
- In the field "GATEWAY" the default gateway of the net is defined. This feature can be enabled or disabled pressing the Check Box field. This feature is used for going out of the net;
- In the field "DNS" the DNS address is defined. This field is required if the server address is define by URL and not IP Address.
- In the field "Port" the port used for MQTT communication is defined;
- In the field "SSID" the name of the Wi-Fi network to connect is defined;
- In the field "Password" the password used to connect to the Wi-Fi network is defined.

TLS (TRANSPORT LAYER SECURITY):

This section is used to define the parameters of TLS protocol. The means of the fields are:

- → If the field "Enable TLS" is checked, the TLS protocol for secure connection is enabled;
- + If the field "Server Authentication" is checked, the authentication of the Server using TLS is enabled. If enabled, in the field "Server Certificate" the certificate from the Server is defined:
- ✤ If the field "Client Authentication" is checked, the authentication of the Client using TLS is enabled. If enabled:
 - in the field "Client Certificate" the certificate from the Client is defined:
 - in the field "Client Key" the private key of the Client is defined;
 - in the field "Client Key Password" the password for the private key of the Client is defined.

NTP (NETWORK TIME PROTOCOL):

This	section	is	used	to	define	the	parameters	of	NTP	protocol.	The	means	of th	ne
field	s are:						•							

- In the field "Server URL" the URL or the IP Address of the NTP Server is defined;
- "**Poll Time (seconds)**" the polling time for the time Figure 3i: "Set Communication \rightarrow NTP" window In the field synchronization is defined.

- In the field "Template" the structure of the MQTT payload is defined. With a double click on it, it is possible to open a window for editing it;
- ✤ In the field "Mnemonic" a description of the topic is defined.

Document code: MN67938_ENG Revision 1.000 Page 26 of 34

SET BACNET ACCESS:

By Pressing the "Set BACnet Access" button from the main window for SW67938 (Fig. 2) the window "BACnet Set Access" appears (Fig. 5).

The window is divided in two parts, the "**BACnet in Read**" that contains the BACnet objects readable by a BACnet Master (the MQTT messages subscribed); and "**BACnet in Write**" that contains the BACnet objects writeable by a BACnet Master (the MQTT messages published).

The meaning of the fields in the window are the follows:

- In the field "Data Type" is possible to select the BACnet object data type;
- In the field "Eng. Unit", with double click the window "Select the BACnet Engineering Unit" appears (Fig. 6);
- In the field "Position" is possible to select the position where take/save the data from a 6000 bytes array;
- The field "Start Bit" is used for the "Binary In" and "Binary Out" BACnet objects;
- The field "Length" is used for all the others BACnet objects;
- In the field "Mnemonic" a description of the object is defined.

BACNET EDE FILE:

By pressing the "**BACnet EDE File**" button it is possible to save the EDE file for the BACnet Master.

UPDATE DEVICE:

By pressing the "**Update Device**" button, it is possible to load the created Configuration into the device; and also the Firmware, if necessary. This by using the Ethernet port.

If you don't know the actual IP address of the device you have to use this procedure:

- Turn OFF the Device;
- Put Dip1 of 'Dip-Switch A' in ON position;
- Turn ON the device
- Connect the Ethernet cable;
- Insert the IP "192.168.2.205";
- Select which operations you want to do;
- Press the "Execute update firmware" button to start the upload;
- When all the operations are "OK" turn OFF the Device;
- Put Dip1 of 'Dip-Switch A' in OFF position;
- Turn ON the device.

If you know the actual IP address of the device, you have to use this procedure:

- Turn ON the Device with the Ethernet cable inserted;
- Insert the actual IP of the Converter;
- Select which operations you want to do;
- Press the "Execute update firmware" button to start the upload;
- ✤ When all the operations are "OK" the device automatically goes at Normal Mode.

At this point the configuration/firmware on the device is correctly updated.

Industrial Electronic Devices

<u>Note:</u>

When you receive the device, for the first time, you also have to update the Firmware in the HD67938 device.

<u>Warning:</u>

If Fig. 8 appears when you try to do the Update try these points before seeking assistance:

- Check if the serial COM port selected is the correct one;
- Check if the serial cable is connected between the PC and the device;
- Try to repeat the operations for the updating;
- Try with another PC;
- Try to restart the PC;
- Check the LAN settings;
- If you are using the program inside a Virtual Machine, try to use in the main Operating System;
- If you are using Windows Seven, Vista, 8 or 10 make sure that you have the administrator privileges;
- In case you have to program more than one device, using the "UDP Update", you have to cancel the ARP table every time you connect a new device on Ethernet. For do this you have to launch the "Command Prompt" and write the command "arp d". Pay attention that with Windows Vista, Seven, 8, 10 you have to launch the "Command Prompt" with Administrator Rights;
- Pay attention at Firewall lock.

TEMPLATE STRING: DEFINITION OF MQTT PAYLOAD

In the section "Set Communication" of the SW67938, it is possible to define a Template string for the MQTT messages. The template is necessary in order to define the structure of the payload of the MQTT message and the info contained. It is possible to have a simple text format or a JSON format.

The definition of the template can be done using Key words, used to link a specific information from/to BACnet. The key words used and their meanings are:

- VALUE: value of the BACnet data
- ✤ <u>TIME</u>: date and time of the MQTT message
- ✤ <u>DESC</u>: description of the message

Warning:

The key words must be defined between "\$" chars in order to be recognized (Ex.: \$VALUE\$).

OTHER REGULATIONS AND STANDARDS:

WEEE INFORMATION

Disposal of old electrical and electronic equipment (as in the European Union and other European countries with separate collection systems).

This symbol on the product or on its packaging indicates that this product may not be treated as household rubbish. Instead, it should be taken to an applicable collection point for the recycling of electrical and electronic equipment. If the product is disposed correctly, you will help prevent potential negative environmental factors and impact of human health, which could otherwise be caused by inappropriate disposal. The recycling of materials will help to conserve natural resources. For more information about recycling this product, please contact your local city office, your household waste disposal service or the shop where you purchased the product.

RESTRICTION OF HAZARDOUS SUBSTANCES DIRECTIVE

The device respects the 2002/95/EC Directive on the restriction of the use of certain hazardous substances in electrical and electronic equipment (commonly referred to as Restriction of Hazardous Substances Directive or RoHS).

CE MARKING

C The product conforms with the essential requirements of the applicable EC directives.

WARRANTIES AND TECHNICAL SUPPORT:

For fast and easy technical support for your ADFweb.com SRL products, consult our internet support at <u>www.adfweb.com</u>. Otherwise contact us at the address support@adfweb.com

RETURN POLICY:

If while using your product you have any problem and you wish to exchange or repair it, please do the following:

- Obtain a Product Return Number (PRN) from our internet support at <u>www.adfweb.com</u>. Together with the request, you need to provide detailed information about the problem.
- Send the product to the address provided with the PRN, having prepaid the shipping costs (shipment costs billed to us will not be accepted).

If the product is within the warranty of twelve months, it will be repaired or exchanged and returned within three weeks. If the product is no longer under warranty, you will receive a repair estimate.
