EtherCAT / MQTT - Converter

(Order Code: HD67E17-A1)

Benefits and Main Features:

- Very easy to configure
- Triple Electrical isolation
- Temperature range: -40°C/+85°C (-40°F/+185°F)

UPDATED DOCUMENTATION:

Dear customer, we thank you for your attention and we remind you that you need to check that the following document is:

- + Updated
- Related to the product you own

To obtain the most recently updated document, note the "document code" that appears at the top right-hand corner of each page of this document.

With this "Document Code" go to web page <u>www.adfweb.com/download/</u> and search for the corresponding code on the page. Click on the proper "Document Code" and download the updates.

REVISION LIST:

Revision	Date	Author	Chapter	Description
1.000	18/09/2020	Ff	All	First Release

WARNING:

ADFweb.com reserves the right to change information in this manual about our product without warning.

ADFweb.com is not responsible for any error this manual may contain.

TRADEMARKS:

All trademarks mentioned in this document belong to their respective owners.

SECURITY ALERT:

GENERAL INFORMATION

To ensure safe operation, the device must be operated according to the instructions in the manual. When using the device, legal and safety regulation are required for each individual application. The same applies also when using accessories.

INTENDED USE

Machines and systems must be designed so the faulty conditions do not lead to a dangerous situation for the operator (i.e. independent limit switches, mechanical interlocks, etc.).

QUALIFIED PERSONNEL

The device can be used only by qualified personnel, strictly in accordance with the specifications.

Qualified personnel are persons who are familiar with the installation, assembly, commissioning and operation of this equipment and who have appropriate qualifications for their job.

RESIDUAL RISKS

The device is state-of-the-art and is safe. The instruments can represent a potential hazard if they are inappropriately installed and operated by untrained personnel. These instructions refer to residual risks with the following symbol:

This symbol indicates that non-observance of the safety instructions is a danger for people that could lead to serious injury or death and / or the possibility of damage.

CE CONFORMITY

The declaration is made by our company. You can send an email to or give us a call if you need it.

EXAMPLE OF CONNECTION:

Document code: MN67E17_ENG Revision 1.000 Page 5 of 31

CONNECTION SCHEME:

Figure 1: Connection scheme for HD67E17-A1

Document code: MN67E17_ENG Revision 1.000 Page 6 of 31

CHARACTERISTICS:

The HD67E17-A1 are EtherCAT / MQTT - Converters.

It allows for the following characteristics:

- ✤ Isolation between EtherCAT MQTT Power Supply;
- Two-directional information between EtherCAT bus and MQTT bus;
- Mountable on 35mm Rail DIN;
- ✤ Wide power supply input range: 8...24V AC or 12...35V DC;
- ➡ Wide temperature range: -40°C / 85°C [-40°F / +185°F].

CONFIGURATION:

You need Compositor SW67E17 software on your PC in order to perform the following:

- Define the parameters of EtherCAT line;
- Define the parameters of MQTT line;
- Define EtherCAT variables to read and write;
- Define the list of MQTT topics to publish/subscribe to the server;
- Export the ESI file for configuration of EtherCAT Master;
- Update the device.

Document code: MN67E17_ENG Revision 1.000 Page 7 of 31

POWER SUPPLY:

The devices can be powered at 8...24V AC and 12...35V DC. For more details see the two tables below.

VAC	\sim	VDC	
Vmin	Vmax	Vmin	Vmax
8V	24V	12V	35V

Consumption at 24V DC:

ſ	Device	Consumption [W/VA]		
	HD67E17-A1	3.5		

Caution: Do not reverse the polarity power

FUNCTION MODES:

The device has got two function modes depending on the position of the 'Dip1 of Dip-Switch A':

- ✤ The first, with 'Dip1 of Dip-Switch A' at "OFF" position, is used for the normal working of the device.
- ✤ The second, with `Dip1 of Dip-Switch A' at ``ON" position, is used for uploading the Project and/or Firmware.

For the operations to follow for the updating, see 'UPDATE DEVICE' section.

According to the functioning mode, the LEDs will have specific functions, see 'LEDS' section.

LEDS:

The device has got seven LEDs that are used to give information about the functioning status. The various meanings of the LEDs are described in the table below.

LED	Normal Mode	Boot Mode
1: Device State (green)	Blinks slowly (~1Hz)	Blinks quickly: Boot state Blinks very slowly (~0.5Hz): update in progress
2: EtherCAT comm. (green)	It blinks when EtherCAT communication is running	Blinks quickly: Boot state Blinks very slowly (~0.5Hz): update in progress
3: MQTT comm. (green)	It blinks when MQTT communication is running	Blinks quickly: Boot state Blinks very slowly (~0.5Hz): update in progress
4: Error state (green)	ON: An error in the communication busses occurs OFF: No errors are present	Blinks quickly: Boot state Blinks very slowly (~0.5Hz): update in progress
5: EtherCAT state (green)	OFF: EtherCAT Master not connected Blinking: EtherCAT Master is connecting ON: EtherCAT Master is connected	Blinks quickly: Boot state Blinks very slowly (~0.5Hz): update in progress
6: Ethernet1 link (green)	ON: Ethernet cable connected OFF: Ethernet cable disconnected	ON: Ethernet cable connected OFF: Ethernet cable disconnected
7: Ethernet2 link (green)	ON: Ethernet cable connected OFF: Ethernet cable disconnected EtherCAT comm. MQTT comm. EtherCAT state EtherCAT state Et	ON: Ethernet cable connected OFF: Ethernet cable disconnected tate LED6: Ethernet link Ethernet link

ETHERCAT

EtherCAT (Ethernet for Control Automation Technology) is an Ethernet-based fieldbus system, invented by Beckhoff Automation. The protocol is standardized in MQTT and is suitable for both hard and soft real-time computing requirements in automation technology. With EtherCAT, the standard Ethernet packet or frame (according to IEEE 802.3) is no longer received, interpreted, and copied as process data at every node. The EtherCAT slave devices read the data addressed to them while the telegram passes through the device, processing data "on the fly". In other words, real-time data and messages are prioritized over more general, less time-sensitive or heavy load data.

The converter has two EtherCAT ports, one is used as Input port (Connector7) and it will receive the incoming messages from the Master, the other is used as Output port (Connector8) and i twill forward the messages to the others nodes of the network.

Document code: MN67E17_ENG Revision 1.000 Page 11 of 31

ETHERNET:

The Ethernet port is used for programming the device and for MQTT communication.

Ethernet connection and the updating of the converter must be made using Connector9 and/or Connector10 of the HD67E17-A1 with at least a Category 5E cable. The maximum length of the cable should not exceed 100m. The cable has to conform to the T568 norms relative to connections in cat.5 up to 100 Mbps. To connect the device to an Hub/Switch is recommended the use of a straight cable, to connect the device to a PC/PLC/other is recommended the use of a cross cable.

Document code: MN67E17_ENG Revision 1.000 Page 12 of 31

USE OF COMPOSITOR SW67E17:

Note:

To configure the Converter, use the available software that runs with Windows called SW67E17. It is downloadable on the site <u>www.adfweb.com</u> and its operation is described in this document. (*This manual is referenced to the last version of the software present on our web site*). The software works with MSWindows (XP, Vista, Seven, 8, 10; 32/64bit).

When launching the SW67E17, the window below appears (Fig. 2).

It is necessary to have installed .Net Framework 4. NEW CONFIGURATION / OPEN CONFIGURATION:

The "New Configuration" button creates the folder which contains the entire device's configuration.

A device's configuration can also be imported or exported:

- To clone the configurations of a programmable "EtherCAT / MQTT Converter" in order to configure another device in the same manner, it is necessary to maintain the folder and all its contents;
- To clone a project in order to obtain a different version of the project, it is sufficient to duplicate the project folder with another name and open the new folder with the button "Open Configuration".

SOFTWARE OPTIONS:

By pressing the "**Settings**" () button there is the possibility to change the language of the software and check the updatings for the compositor.

In the section "Language" it is possible to change the language of the software.

Software Options	×
SW67E17

Document code: MN67E17_ENG Revision 1.000 Page 16 of 31

SET COMMUNICATION:

This section define the fundamental communication parameters of two buses, EtherCAT and MQTT.

By Pressing the "**Set Communication**" button from the main window for SW67E17 (Fig. 2) the window "Set Communication" appears (Fig. 3).

The window is divided in different sections in order to define the different parameters of the converter:

- EtherCAT Slave
- MQTT
- Ethernet
- + Wi-Fi
- TLS (Transport Layer Security)
- NTP (Network Time Protocol)

Set Communication	×

5. TLS (Transport Layer Security)	Ð
6. NTP (Network Time Protocol)	Ð
OK X Cancel	

Figure 3a: "Set Communication" window

ETHERCAT SLAVE:

This section is used to define the general parameters of EtherCAT. The means of the fields are:

- In the field "Revision Number" the revision number of the converter is defined;
- In the field "Slave Name" the name of the converter is defined;
- In the field "Node Address" the ID of the converter is defined.

<u>Мотт:</u>

This section is used to define the main parameters of MQTT line. The means of the fields are:

- In the field "Server URL" the URL or the IP Address of the MQTT Server is defined;
- In the field "Server Port" the port used for MQTT communication is defined;
- In the field "Client ID" the Client ID of the converter is defined (if ned);
- In the field "Keep Alive (seconds)" the delay with which the Keep Alive message is sent on MQTT is defined;
- If the field "Clean Session" is checked, the last MQTT messages are deleted by the Server and the Client in case of missing ACK. If unchecked, the Server and the Client hold the last MQTT messages and, in case of incorrect disconnection or missing ACK, they try to send again them since all the ACK messages are exchanged correctly (valid only for OoS 1 and OoS 2);
- If the field "Will Flag" is checked, the converter will publish the Will topic at the connection to the Server. With this feature, in case
 of incorrect disconnection, the Server will publish this topic to all the MQTT Clients that subscribed it;
- In the field "Topic Name Will" the topic used for Will message is defined;
- In the field "Message Will" the payload of the Will message is defined;
- In the field "Retained Will" the converter will send the Will message with Retain flag enabled. In this way, the Server will hold the last Will message;
- In the field "QoS Will" the QoS type for Will message is defined;
- Im the field "Username" the username for the connection to the MQTT server is defined;
- ✤ In the field "Password" the password for the connection to the MQTT server is defined.

ETHERNET:

This section is used to define the general parameters of Ethernet. The means of the fields are:

- In the field "Ip Address" the IP address of the converter is defined;
- In the field "SubNet Mask" the Subnet Mask of the converter is defined;
- In the field "Gateway" the default gateway of the net is defined. This feature can be enabled or disabled pressing the Check Box field. This feature is used for going out of the net;
- In the field "DNS" the DNS address is defined. This field is required if the server address is define by URL and not IP Address.

<u>WI-FI:</u>

This section is used to define the general parameters of Wi-Fi. It is possible to defined the type of Wi-Fi communication:

- Access Point;
- Client.

The means of the fields for Access Point configuration are:

- In the field "IP Address" the IP address of the converter is defined;
- In the field "Subnet Mask" the SubNet Mask of the converter is defined;
- In the field "GATEWAY" the default gateway of the net is defined. This feature can be enabled or disabled pressing the Check Box field. This feature is used for going out of the net;
- In the field "DNS" the DNS address is defined. This field is required if the server address is define by URL and not IP Address.
- In the field "Port" the port used for MQTT communication is defined;
- In the field "SSID" the name of the Wi-Fi network to create is defined;
- In the field "Password" the password used for Wi-Fi connection is defined;
- In the field "Type" the type of security protocol used by the Wi-Fi network is defined;

Secure Type	Unsect	ured		~
Enable DHCP				
Max Client	1			~

Figure 3e: "Set Communication → Wi-Fi" window

- If the field "Enable DHCP" is checked, the converter acts as DHCP Server for the Clients connected. If the option is enabled, in the fields "DHCP First IP Address" and "DHCP SUBNET Mask" the IP Addresses range used for DHCP is defined. In the field "Lease Time (seconds)" the required time for the renewing of the IP Address assigned to the Client is defined;
- In the field "Max Client" the maximum number of Wi-Fi Clients accepted is defined;
- ✤ In the field "Channel" the channel for Wi-Fi communication is defined.

The means of the fields for Client configuration are:

- If the field "Obtain an IP Address automatically" is checked, the converter gets the IP Address using DHCP. Otherwise, the IP Address is defined as static;
- In the field "IP Address" the IP address of the converter is defined;
- In the field "Subnet Mask" the SubNet Mask of the converter is defined;
- In the field "GATEWAY" the default gateway of the net is defined. This feature can be enabled or disabled pressing the Check Box field. This feature is used for going out of the net;
- In the field "DNS" the DNS address is defined. This field is required if the server address is define by URL and not IP Address.
- In the field "Port" the port used for MQTT communication is defined;
- In the field "SSID" the name of the Wi-Fi network to connect is defined;
- In the field "Password" the password used to connect to the Wi-Fi network is defined.

Industrial Electronic Devices

TLS:

This section is used to define the parameters of TLS protocol. The means of the fields are:

- If the field "Enable TLS" is checked, the TLS protocol for secure connection is enabled;
- If the field "Server Authentication" is checked, the authentication of the Server using TLS is enabled. If enabled, in the field "Server Certificate" the certificate from the Server is defined;
- If the field "Client Authentication" is checked, the authentication of the Client using TLS is enabled. If enabled:
 - o in the field "Client Certificate" the certificate from the Client is defined;
 - \circ $\;$ in the field "Client Key" the private key of the Client is defined;
 - $\circ~$ in the field "Client Key Password" the password for the private key of the Client is defined.

NTP (NETWORK TIME PROTOCOL):

This section is used to define the parameters of NTP protocol. The means of the fields are:

- In the field "Server URL" the URL or the IP Address of the NTP Server is defined;
- In the field "Poll Time (seconds)" the polling time for the time synchronization is defined.

ETHERCAT SET ACCESS:

By Pressing the "EtherCAT Set Access" button from the main window for SW67E17 (Fig. 2) the window "EtherCAT Slave Set Access" appears (Fig. 4).

This section is used to define the EtherCAT variables readable by the EtherCAT Master (Slave To Master) and the EtherCAT variables writeable by the EtherCAT Master (Master To Slave).

SLAVE TO MASTER

Figure 4a: "EtherCAT Slave Set Access → Slave To Master" window

The means of the fields are:

- If the field "Enable" is checked, the EtherCAT variable is enabled;
- In the field "Type" the data format of the EtherCAT variable is defined;
- In the field "Lenght" the dimension of the EtherCAT variable is defined;
- In the field "Name" the name of the EtherCAT variable is defined;
- In the field "Init Value" the default value of the EtherCAT variable is defined;
- In the field "Position" the starting address of the EtherCAT array where the variable is mapped is defined;
- In the field "Start Bit" the starting bit of the selected Position where the variable is mapped is defined;
- ✤ In the field "Mnemonic" a description of the variable is defined.

MQTT SET TOPIC:

By Pressing the "**MQTT Set Topic**" button from the main window for SW67E17 (Fig. 2) the window "Set MQTT Topics" appears (Fig. 5). This section is used to define the MQTT topics where the converter will publish the data from Modbus and the topic that the converter will subscribes for writing the data to Modbus.

- In the field "**Mnemonic**" a description of the topic is defined.

ETHERCAT ESI FILE:

By pressing the "**EtherCAT ESI File**" button it is possible to save the ESI file for the EtherCAT side of the converter. The ESI file is used to configure the EtherCAT Master.

MOTT SUBSCRIBE

Document code: MN67E17_ENG Revision 1.000 Page 25 of 31

UPDATE DEVICE:

By pressing the **"Update Device**" button, it is possible to load the created Configuration into the device; and also the Firmware, if necessary. This by using the Ethernet port.

If you don't know the actual IP address of the device you have to use this procedure:

- Turn OFF the Device;
- Put Dip1 of 'Dip-Switch A' in ON position;
- Turn ON the device
- Connect the Ethernet cable;
- Insert the IP "192.168.2.205";
- Select which operations you want to do;
- Press the "Execute update firmware" button to start the upload;
- When all the operations are "OK" turn OFF the Device;
- Put Dip1 of 'Dip-Switch A' in OFF position;
- Turn ON the device.

If you know the actual IP address of the device, you have to use this procedure:

- Turn ON the Device with the Ethernet cable inserted;
- Insert the actual IP of the Converter;
- Select which operations you want to do;
- Press the "Execute update firmware" button to start the upload;
- ✤ When all the operations are "OK" the device automatically goes at Normal Mode.

At this point the configuration/firmware on the device is correctly updated.

Figure 6: "Update device" windows

Document code: MN67E17_ENG Revision 1.000 Page 26 of 31

/ Note:

When you receive the device, for the first time, you also have to update the Firmware in the HD67E17 device.

Warning: If Fig. 7 appears when you try to do the Update try these points before seeking assistance: Try to repeat the operations for the updating; Try with another PC; Try to restart the PC; Check the LAN settings; If you are using the program inside a Virtual Machine, try to use in the main Operating System;

- If you are using Windows Seven, Vista, 8 or 10 make sure that you have the administrator privileges;
- In case you have to program more than one device, using the "UDP Update", you have to cancel the ARP table every time you connect a new device on Ethernet. For do this you have to launch the "Command Prompt" and write the command "arp d". Pay attention that with Windows Vista, Seven, 8, 10 you have to launch the "Command Prompt" with Administrator Rights;
- Pay attention at Firewall lock.

Warning	:

In the case of HD67E17 you have to use the software "HD67E17": www.adfweb.com\download\filefold\SW67E17.zip.

TEMPLATE STRING: DEFINITION OF MQTT PAYLOAD

In the section "Set Communication" of the SW67E17, it is possible to define a Template string for the MQTT messages. The template is necessary in order to define the structure of the payload of the MQTT message and the info contained. It is possible to have a simple text format or a JSON format.

The definition of the template can be done using Key words, used to link a specific information from/to EtherCAT. The key words used and their meanings are:

- ✤ <u>VALUE</u>: value of the EtherCAT data
- ✤ <u>TIME</u>: date and time of the MQTT message
- DESC: description of the message

Warning:

The key words must be defined between "\$" chars in order to be recognized (Ex.: \$VALUE\$).

OTHER REGULATIONS AND STANDARDS:

WEEE INFORMATION

Disposal of old electrical and electronic equipment (as in the European Union and other European countries with separate collection systems).

This symbol on the product or on its packaging indicates that this product may not be treated as household rubbish. Instead, it should be taken to an applicable collection point for the recycling of electrical and electronic equipment. If the product is disposed correctly, you will help prevent potential negative environmental factors and impact of human health, which could otherwise be caused by inappropriate disposal. The recycling of materials will help to conserve natural resources. For more information about recycling this product, please contact your local city office, your household waste disposal service or the shop where you purchased the product.

RESTRICTION OF HAZARDOUS SUBSTANCES DIRECTIVE

The device respects the 2002/95/EC Directive on the restriction of the use of certain hazardous substances in electrical and electronic equipment (commonly referred to as Restriction of Hazardous Substances Directive or RoHS).

CE MARKING

C The product conforms with the essential requirements of the applicable EC directives.

WARRANTIES AND TECHNICAL SUPPORT:

For fast and easy technical support for your ADFweb.com SRL products, consult our internet support at <u>www.adfweb.com</u>. Otherwise contact us at the address support@adfweb.com

RETURN POLICY:

If while using your product you have any problem and you wish to exchange or repair it, please do the following:

- Obtain a Product Return Number (PRN) from our internet support at <u>www.adfweb.com</u>. Together with the request, you need to provide detailed information about the problem.
- Send the product to the address provided with the PRN, having prepaid the shipping costs (shipment costs billed to us will not be accepted).

If the product is within the warranty of twelve months, it will be repaired or exchanged and returned within three weeks. If the product is no longer under warranty, you will receive a repair estimate.
